Receipt and Invoice Digitizer A Smart OCR-Based Document Processing System

Presented by Shaik Ayisha

Introduction

Businesses and individuals often deal with large numbers of receipts and invoices. Problems include:

- Manual data entry is time-consuming
- High chance of human error
- Difficult to organize and retrieve records
- Paper documents are hard to manage and store

Proposed Solution

The Receipt and Invoice Digitizer automates document processing.
Key functionalities:

- Capture receipts via camera or upload
- Extract text using OCR
- Identify key fields like:
  - Merchant Name
  - Date
  - Total Amount
  - Items
- Store data digitally for easy access
- AI chatbot to assist users with queries

Key Features

- OCR-based text extraction
- Automatic key-field detection
- Real-time camera scanning
- Google Authentication for secure login
- AI Chatbot powered by Gemini API
- User-friendly interface
- Digital storage of receipts and invoices

Technologies Used

Frontend
- React
- HTML, CSS
- JavaScript

Backend
- Flask (Python)

AI & Processing
- OCR libraries
- Gemini API (Chatbot)

Authentication
- Google OAuth

Tools
- Git
- VS Code
- Node.js

Conclusion & Future Improvements

Conclusion

- The system simplifies receipt and invoice management.
- Reduces manual effort and improves accuracy.
- Provides an intelligent interface with chatbot support

.

Future Enhancements

- Expense analytics dashboard
- Automatic expense categorization
- Multi-language receipt support
- Cloud storage integration

Thank You
